About Me

As a Full-Stack Web Developer and AI Solutions Architect with over six years of experience, I specialize in building high performance web applications and intelligent automation systems. By combining deep expertise in Next.js, PHP, JavaScript, and custom WordPress plugin development with advanced AI architecture, including Custom MCP Creation, RAG pipelines, and LLM routing on Google Cloud, I deliver scalable, cost-optimized digital platforms tailored to complex business needs. From engineering custom e-commerce solutions on Shopify and WordPress to automating end-to-end CRM workflows and optimizing page speed, I focus on turning technical challenges into seamless, high-converting user experiences.

Other Work

I volunteered at the Bangladesh Red Crescent Society from January to April 2021. During my time there, I worked in the Disaster Response Team, providing relief and assistance to victims of the recent floods in Bangladesh. My duties included: Distributing food, water, and other essential supplies to affected families Providing medical care to injured and sick people

Assisting with the cleanup and rebuilding efforts I also took part in several training sessions on disaster preparedness and response. These sessions helped me to learn about the different types of disasters that can occur in Bangladesh, as well as the best practices for responding to them. I am grateful for the opportunity to have volunteered at the Bangladesh Red Crescent Society. It was a rewarding experience that taught me a great deal about humanitarian work and the importance of helping others. I am confident that the skills and knowledge that I gained during my time there will be valuable in my future career.
